SUMMARY

Computer Science Engineering graduate (2025) with practical experience in **Python-based AI development**. Successfully built a project using **Pandas**, **NumPy**, and **PyTorch**, focused on creating an intelligent system for **automated invoice generation** and **analytics**. The project involved data preprocessing, model training, and integration of a user-friendly interface with advanced features like **PDF generation** and **cloud backup**. Currently expanding expertise in Java and exploring deeper applications in machine learning and automation.

EDUCATION

- Chendhuran college of engineering and technology
Bachelor of engineering in Computer Science, May 2025 CGPA:7.5
- Subramanian polytechnic college
Diploma in computer technology, May 2022 Percent: 80

SKILLS

- Languages:** C, C++ Python, Java, HTML, CSS
- Databases/OS:** MySQL, SQLite, Linux, Windows
- Tools & Frameworks:** Git, Google Colab, CustomTkinter
- AI/ML:** Supervised Learning, Unsupervised Learning, NLP,
- Soft Skills:** Critical Thinking, Problem-Solving, Effective Communication

PROJECTS

Smart Invoice and Analytics System

(Technologies: Python, PyTorch, Pandas, NumPy, SQLite, CustomTkinter)

- Developed an AI-driven desktop application for automated invoice generation and data analytics.
- Used Pandas and NumPy for data preprocessing, transformation, and transaction analysis.
- Built and trained a custom neural network model using PyTorch to classify and process input patterns.
- Designed an interactive GUI with CustomTkinter for seamless user experience.
- Integrated SQLite for efficient local data storage and retrieval.
- Enabled PDF export, Google Drive backup, and WhatsApp-based invoice sharing to enhance functionality.
- Improved accuracy and efficiency of invoice handling, reducing manual input and enabling real-time insights.

CERTIFICATES

- Java Essentials - LinkedIn Learning, Completed July 2025
- Django-LinkedIn Learning, Completed July 2025
